Trauma can make the nervous system persistently reactive. Once an acute painful injury or illness occurs, people with an already reactive nervous system are more prone to develop chronic pain. Of course, a history of trauma is not necessary to develop chronic pain. Many people without a history of trauma can

President Abraham Lincoln drove creation of the first trauma manual, which was the first time processes to care for injured patients were formally documented. Later, the concept of taking researchers into the battlefield to study outcomes (or how they fare after their treatment) began during World War II.
