Authorization Federation In Multi Tenant Multi Cloud Iaas

Avoid user information provisioning during federated authentication - One slight downside of a federated multi-tenant SSO solution is a feature that is built-in to IDP federation. The users that are authenticated from the external IDPs (the tenant realms in this scenario) are “provisioned” into the federator realm to be reused later.

Authentication and Authorization for ElasticSearch: 03 ...

In addition to the multi-tenancy, Kill Bill also requires authentication and implements authorization validation on each request. Logically, the multi-tenancy feature and the authentication/authorization are two separate concepts: a given user has access to a (some) specific tenant (s) and that user has some specific set of permissions.

Multi-tenancy and Authorization - Kill Bill

Added federation_type RP registration metadata value and federation_types_supported OP metadata value. Deleted openid_discovery metadata type identifier since its purpose is already served by openid_provider. Entity identifier paths are now included when using the Federation API, enabling use in multi-tenant deployments sharing a common domain ...

OpenID Connect Federation 1.0 - draft 12

The best way to architect Auth0 to support a multi-tenant application is to use a single Auth0 domain. The multi-tenant application would then be represented in Auth0 as a single application within the “Application” section. This means that the multi-tenant application will only use a single
