This page contains resources about Bayesian Inference and Bayesian Machine Learning. Bayesian Networks do not necessarily follow Bayesian approach, but they are named after Bayes' Rule. Bayes' Rule can be used at both the parameter level and the model level.

First, to provide a comprehensive introduction to machine learning, moving beyond the supervised case and ultimately presenting state-of-the-art methods. Second, to provide an introduction to the wider area of probabilistic methods for representing

and reasoning with knowledge.

Automatically learning the graph structure of a Bayesian network (BN) is a challenge pursued within machine learning. The basic idea goes back to a recovery algorithm developed by

Rebane and Pearl [6] and rests on the distinction between the three possible patterns allowed in a 3-node DAG:

Bayesian inference is a method of statistical inference in which Bayes' theorem is used to update the probability for a hypothesis as more evidence or information becomes available. Bayesian inference is an

important technique in statistics, and especially in mathematical statistics.

My recent work has focused on large scale modeling with Bayesian methods, methods for counterfactual reasoning, Bayesian nonparametrics, and Gaussian Processes. I am also excited about addressing challenges related to the use

of data-driven tools for decision-making. I direct the Machine Learning and Healthcare Lab at Johns Hopkins University.
