The relationship between hospitals and the environment is defined by a glaring contradiction: as health care facilities deliver care at any cost, their environmental footprint -- pollution, waste production, unsustainable food services -- contributes to harming community health. Greening Health Care examines the intersections of health care and environmental health, both in terms of traditional failures and the revolution underway to fix them. Authored by one of the pioneers in health care's

green movement, it presents practical solutions for health care organizations and clinicians to improve their environments and the health of their communities. Topics include: making food services sustainable, managing hospital waste, and relevant impacts/mitigating measures related to climate change. As environmental protection grows into an imperative for all aspects of society, Greening Health Care offers an historical and practical approach to sustainable health care delivery.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways.

*Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Kaiser Permanente is the largest managed care organization in the country. It also happens to have the largest and most complex labor-management partnership ever created in the United States. This book tells the story of that partnership-how it started, how it grew, who made it happen, and the lessons to be learned from its successes and complications. With twenty-seven unions and an organization as complex as 8.6-million-member Kaiser Permanente, establishing the partnership was not a simple task and maintaining it has proven to be extraordinarily challenging. Thomas A. Kochan, Adrienne E. Eaton, Robert B. McKersie, and Paul S. Adler are among a team of researchers who have been tracking the evolution of the partnership between Kaiser Permanente and the Coalition of Kaiser Permanente Unions ever since 2001. They review the history of health care labor relations and present a profile of Kaiser Permanente as it has developed over the years. They then delve into the partnership, discussing its achievements and struggles, including the negotiation of the most innovative collective bargaining agreements in the history of American labor relations. *Healing Together* concludes with an assessment of the Kaiser partnership's effect on the larger health care system and its implications for labor-management relations in other industries.

Part of the *Neurosurgery by Example* series, this volume on surgical neuro-oncology presents exemplary cases in which renowned authors guide readers through the assessment and planning, decision making, surgical procedure, after care, and complication management of common and uncommon disorders. The cases explore a number of different types of nervous systems tumors, including glioblastoma, medulloblastoma, skull tumors, and more. Each chapter also contains 'pivot points' that illuminate changes required to manage patients in alternate or atypical situations, and pearls for accurate diagnosis, successful

treatment, and effective complication management. Containing a focused review of medical evidence and expected outcomes, Surgical Neuro-Oncology is appropriate for neurosurgeons who wish to learn more about this subspecialty, and those preparing for the American Board of Neurological Surgery oral examination.

Tracing the unforgettable tale of a little black girl from a small Ohio town who dared to dream above her station, this memoir captures the larger history of black people in America, from the arrival of Ellamae Simmons' ancestors aboard a slaving vessel in 1775, to the electrifying election of the nation's first African American president. Ellamae came of age at a time when even the most gifted Negro girls were expected to become domestics in white homes. But Ellamae yearned to study medicine, and she set about creating a world in which she could do just that. For most of her 97 years, she has been writing her story of struggle and triumph against the odds, refusing to let disappointment or heartbreak turn her aside. Delving into themes of inclusion and social justice, education and mental health, marriage and family, this is the story of a woman who wasn't content to just witness history, she went out and made her own.

The most complete, authoritative guide available on the diagnosis and treatment of disorders affecting the elderly -- updated with a new global perspective A Doody's Core Title for 2011! "In addition to serving as a timely, comprehensive, state-of-the-art textbook of geriatric medicine anchored in science, evidence-based medicine, and patient-centered practice, the book also is intended to meet the learning needs of fellows in geriatric medicine. The authors succeed in modeling a textbook of geriatric medicine on textbooks of internal medicine. 3 Stars."--Doody's Review Service The undisputed leader on the subject of geriatrics, this comprehensive guide combines gerontology principles with clinical geriatrics offering unmatched coverage of this area of medicine. Written by some of the world's most respected geriatricians, Hazzard's Principles of Geriatric Medicine and Gerontology presents the most up-to-date, evidence-based medical information available -- in a revamped 2-color design that makes finding the answers to your questions faster and easier than ever. Features: A greater emphasis on evidence-based medicine through the expanded use of Clinical Practice Guidelines and references to systematic reviews and critically appraised topics A new international advisory board of 12 global authorities and an increased number of international contributors for a greater global perspective Important new chapters on the cultural aspects of geriatrics, emergency geriatrics, hospital geriatrics, international geriatric care, and rural geriatric care Information integrated with additional online resources Tables, drawings, and clinical algorithms made even more effective by a new two-color design 300 illustrations (including 64 in a full-color insert)

The definitive, stand-alone companion book to the acclaimed documentary—now with 50 plant-based recipes and full-color photos to help you start changing your health for the better There's something terribly broken in our industrial food, medical, and pharmaceutical systems. What's going wrong? Can we really avoid the leading causes of death just by changing our diet? Kip Andersen and Keegan Kuhn, creators of the revolutionary What the Health and the award-winning

Cowspiracy documentaries, take readers on a science-based tour of the hazards posed by consuming animal products—and what happens when we stop. What the Health will guide you on an adventure through this maze of misinformation with the same fresh, engaging approach that made the documentary so popular. Journey with Andersen and Kuhn as they crisscross the country, talking to doctors, dietitians, public health advocates, whistle-blowers, and world-class athletes, to uncover the truth behind the food we eat. With the help of writer Eunice Wong, they empower eaters with knowledge about the lethal entwining of the food, medical, and pharmaceutical industries, and about the corporate web that confuses the public and keeps Americans chronically—and profitably—ill. Plus, discover 50 recipes to help you reclaim your life and health, including: □ Creamy Mac □ PB&J Smoothie □ Winter Lentil and Pomegranate Salad □ Mom's Ultimate Vegan Chili □ Black Bean Fudgy Brownies □ Baked Apple Crumble with Coconut Cream If the film was a peephole, then the book knocks down the whole door, featuring expanded interviews, extensive research, and new personal narratives. There's a health revolution brewing. What the Health is your invitation to join.

This book constitutes the refereed proceedings of the 12th International Baltic Conference on Databases and Information Systems, DB&IS 2016, held in Riga, Latvia, in July 2016. The 25 revised full papers presented were carefully reviewed and selected from 62 submissions. The papers are organized in topical sections on ontology, conceptual modeling and databases; tools, technologies and languages for model-driven development; decision support systems and data mining; advanced systems and technologies; business process modeling and performance measurement; software testing and quality assurance; linguistic components of IS; information technology in teaching and learning.

With abundant at-a-glance tables, the volume reviews normal histology before examining abnormal findings, covers all of the most commonly seen neoplastic and non-neoplastic conditions of the endocrine system, and uses a consistent, user-friendly format to explore each entity's clinical features pathologic features (gross and microscopic) ancillary studies differential diagnoses and prognostic and therapeutic considerations. Heavily illustrated.
