The officially licensed *Corvette Stingray: The Mid-Engine Revolution* chronicles the full development story behind Chevrolet's re-imagined sports car with an engaging, detailed text and photography from GM's archives and Corvette team members. Corvette is Chevrolet's iconic performance car. Its importance to the brand cannot be overstated. Thus each new generation is sweated by Chevy's designers, engineers, marketing staff, and executives to ensure that it sets the bar higher than the preceding version. With the eighth generation, Chevrolet has done more than raise the bar or move the goalpost--they've torn down the stadium and started from scratch. For the first time ever in a production version, the new Corvette features a mid-engine configuration. Though Corvette engineers have experimented with this engine placement over the past several decades, 2020 marks the first time GM has committed it to production cars. Corvette already had prodigious power on tap, but its front-engine configuration put some limitations on its handling and traction. The new mid-engine Corvette eliminates any final performance barriers and takes the battle to supercar rivals like Ferrari, Lamborghini, and McLaren. It's the story every Corvette fan needs to read.

Chevy Tri-Five Custom Interiors is the first of a series of books featuring the work of Ron Mangus, well-known for award-winning custom hot rod interiors. *Chevy Tri-Five Custom Interiors* features four, two-page photographic spreads for beautiful, custom, award-winning 1955, 1956, and 1957 Chevy hot rods. The cars and interiors presented in the book will inspire readers and help them visualize interior design possibilities for their own cars. Detailed photographs of the interior features accompanied by Ron's captions explain the ideas behind the interiors—the design process, color and material selections, unique features, challenges, sound system solutions, and some of the creative problem-solving needed to work out the design. Ron is continually asked by customers and hotrod enthusiasts for pictorials of his interiors to enjoy and inspire, and this series answers the desire for a presentation of his creativity and innovation.

From the resumption of automobile production at the close of World War II through the 1950s, the American auto industry would see the births and deaths of several manufacturers, great technological advances, and an era of dramatic styling as a prospering nation asserted its growing mobility. Cars of this period are among the most iconic vehicles ever built in the United States: the 1949 Ford, the remarkable Studebaker designs of 1950 and 1953, the 1955–1957 Chevrolets, the “Forward Look” Chrysler products, the ill-fated Edsel and many others. This comprehensive reference book details every model from each of the major manufacturers (including independents such as Kaiser-Frazer and Crosley but excluding very low-volume marques such as Tucker) from model years 1946 through 1959. Year by year, it provides an overview of the industry and market, followed by an individual report on each

company: its main news for the year (introductions or cancellations of models, new engines and transmissions, advertising themes, sales trends etc.); its production figures and market status; and its powertrain offerings, paint colors and major options. The company ' s models are then detailed individually with such information as body styles, prices, dimensions and weights, standard equipment and production figures. Nearly 1,000 photographs are included.

As the 1950s dawned, General Motors focused its industrial might on producing revolutionary rather than evolutionary cars with the ultimate goal to become the clear market leader in the automotive industry. To accomplish this goal, the company designed, developed, and consistently released innovative automotive technology. During the decade, Chevrolet introduced the small-block V-8, automatic transmission, air-conditioning, power steering, and many other innovations that made the cars faster, more comfortable, and safer. All of the pieces had fallen into place. General Motors had astute leadership, a brilliant engineering team, forward-thinking stylists, a massive manufacturing infrastructure, and the capability to produce cutting-edge technology. With unbridled optimism and exuberance to meet the demands of the booming U.S. economy of the 1950s, the company designed, developed, and delivered an unprecedented number of breakthrough technologies, and established the blueprint for the modern automobile. Automotive historian and veteran author David Temple goes behind the scenes to reveal how these technologies were designed, manufactured, and installed on Chevrolet ' s fine portfolio of cars: the Corvette, 1955-1957 Bel Air, Nomad, Impala, and many more. Inside General Motors, many dedicated and talented leaders who were determined to make Chevrolet cars the best on the market. Vice President of Styling Harley Earl and his team designed the 1952 Corvette concept car for the Motorama show. After receiving numerous accolades, it was rushed into production. Design chief Bill Mitchell used his design acumen and creative vision as he led his team to style the 1955-1957 Bel-Air. Zora Arkus-Duntov worked tirelessly and transformed the Corvette from a touring car into a genuine sports car. Ed Cole and his engineers overcame many challenges to develop the compact, efficient, and powerful Chevy small-block V-8, which continued in production for decades. Chevrolets of the 1950s retraces the design, development, and production of these cars, but it also covers innovative vital components that were installed in them. If you have been looking for the inside story on GM ' s arguably greatest decade, the models, and the technology it produced, you have found it.
