In 2004 the Indonesian government made a commitment to provide its entire population with health insurance coverage through a mandatory public health insurance scheme. It has moved boldly already provides coverage to an estimated 76.4 million poor and near poor, funded through the public budget. Nevertheless, over half the population still lacks health insurance coverage, and the full fiscal impacts of the government's program for the poor have not been fully assessed or felt. In addition, significant deficiencies in the efficiency and equity of the current health system, unless addressed will exacerbate cost pressures and could preclude the effective implementation of universal coverage (Ue and the desired result of improvements in population health outcomes and financial protection. For Indonesia to achieve UC, systems' performance must be improved and key policy choices with respect to the configuration of the health financing system must be made. Indonesia's health system performs well with respect to some health outcomes and financial protection, but there is potential for significant improvement. High-level political decisions are necessary on key elements of the health financing reform package. The key transitional questions to get there include: [the benefits that can be afforded and their impacts on health outcomes and financial protection; [how the more than 50 percent of those currently without coverage will be insured; [how to pay medical care providers to assure

access, efficiency, and quality; [developing a streamlined and efficient administrative structure; [how to address the current supply constraints to assure availability of promised services; [how to raise revenues to finance the system, including the program for the poor as well as currently uninsured groups that may require government subsidization such as the more than 60 million informal sector workers, the 85 percent of workers in firms of less than five employees, and the 70 percent of the population living in rural areas.

Publisher Description

National health accounts are a key practical tool for policy-makers interested in evaluating and restructuring their nation's health care financing and assessing financial interventions to improve people's health. This publication provides guidance in developing socioeconomic information to help establish a framework for national health accounts, including defining health expenditure, acquiring and evaluating data, non-survey data sources, using surveys, estimation procedures and financing agents.

This text for practical graduate and undergraduate courses in information systems development discusses systems analysis and development methodology, and describes activities, tools, and techniques for analyzing business requirements for an improved system in the front-end, middle life, and back-end cycles. The authors also provide modules on phases of systems development that span life cycles, such as project management, information gathering, cost-benefit analysis, and joint application development. analysis. Starting from the premise that policy analysis is an applied social science discipline designed for solving practical problems facing public and nonprofit organizations, the book bridges the gap between theory and practice. It provides practical skills for conducting policy analysis and communicating findings through memos, position papers, and other forms of structured analytical writing. The book asks readers to critically analyze the arguments of policy practitioners as well as political scientists, economists, and political philosophers.

The 2nd International Conference on Sustainable Innovation emphasizes on natural resources technology and management to support the sustainability of mankind. The main theme of ICoSI 2014 “ Technology and innovation challenges in natural resources and built environment management for humanity and sustainability ” reflects the needs of immediate action from scientists with different fields and different geographical background to face the global issue on world ’ s change.

Anthropology is a flourishing discipline in Southeast Asia. This book makes visible the development of national traditions and transnational practices of anthropology across the region. The authors are practising anthropologists with decades of experience in the intellectual traditions and institutions that have taken root in the region. Three overlapping issues are addressed in these pages. First, the historical development of traditions of research, scholarship, and social engagement across diverse anthropological communities of the region, which have adopted and adapted global anthropological trends to their local circumstances. Second, the opportunities and challenges faced by Southeast Asian anthropologists as they practise their craft in different political contexts. Third, the emergence of locally-grounded, intra-regional, transnational linkages and practices. The book contributes to a 21st-century, world anthropologies paradigm from a Southeast Asian perspective.

The 2019 edition of Policy Coherence for Sustainable Development looks at countries' efforts to meet this challenge and identifies opportunities for accelerating progress. The third in a series, it shows how integrated and coherent policies, supported by strong institutional and governance mechanisms, can contribute to empowering people and ensuring inclusiveness and equality.

The Framework for a Public Health Emergency Operations Centre (PHEOC framework) document is intended to be used by practitioners of public health; health policy makers; and authorities and agencies responsible for managing emergencies, incidents, or events where the health of populations is at risk. This document provides high-level methodical guidance for designing, developing, and strengthening of public health emergency operations centers. This interim document outlines the key concepts and essential requirements for developing and managing a public health EOC (PHEOC). The overall approach is generic and based on widely acknowledged elements of all-hazards emergency management. It provides an outline for developing and managing a PHEOC to achieve a goal-oriented response to public health emergencies and unity of effort among response agencies. The document will be revised as necessary. Practical guidance on specific aspects of the PHEOC framework will be developed and published separately. A public health emergency is here defined as an occurrence, or imminent threat, of an illness or health condition that poses a substantial risk of a significant number of human fatalities, injuries or permanent or long-term disability. Public health emergencies can result from a wide range of hazards and complex emergencies. Experience has shown that timely implementation of an EOC provides an essential platform for the effective management of public health emergencies. Public health emergencies involve increased incidence of illness, injury and/or death and require special measures to address increased morbidity, mortality and interruption of essential health services. For such emergencies, a multi-agency, multi-jurisdictional response is often required, working
