But we had not yet captured that interdependence that we experienced in our clinical work—the spiral of illness to ... us of the important role of pneumonia in the arc of patients' lives. They ...

Clinical neuropsychologists are increasingly involved in the evaluation of civil capacities and are in demand by other professionals, particularly attorneys and judges, to assist their decision-making about these sometimes complex issues. While there has been some neuropsychological research in this area, this has not been assembled into a single volume nor have practice recommendations been provided. This volume fills these gaps. The first part of this volume reviews and synthesizes the research literature on neuropsychological aspects of civil capacities. The specific capacities addressed include driving, financial and healthcare decision-making, testamentary (i.e., will-making) capacity, and personal care and independence. Each chapter addresses relevant background issues, conceptual/theoretical advances, and empirical findings. The chapters also include an illustrative case study that demonstrates how the authors (each expert in the various areas) evaluated and conceptualized the case. Each chapter is written from an evidence-based perspective and, where appropriate, uses research to inform practice recommendations. The second part of this volume provides recommendations to practitioners on how to conduct civil capacity evaluations that utilize neuropsychological assessment. There are chapters on an evaluative framework for the assessment, capacity test selection and psychometric issues, working with other data sources besides testing (e.g., collateral interviews), best practices in report-writing and testifying, as well as common ethical issues in such cases. Throughout, these chapters provide practical "how to" advice to improve neuropsychological practice and consulting in civil capacity cases. In addition to these chapters, there is a chapter written by legal consumers of psychological reports. This chapter offers a wealth of useful information and recommendations that, if followed, will further serve to advance psychological report-writing and consultation in civil capacity evaluations.

Because aging is accompanied by a steady decline in resistance to infectious diseases, the diagnosis and treatment of these diseases in the elderly is not only much more complex, but also often quite different from that for younger patients. In the second edition of *Infectious Disease in the Aging: A Clinical Handbook*, a panel of well known and highly experienced geriatric physicians and infectious disease experts review the most important common infections affecting the elderly and delineate their well-proven diagnostic, therapeutic, and preventive techniques. Among the illnesses discussed are urinary tract infections, pneumonia, ocular infections, tuberculosis, and fungal and viral infections. In addition, there are detailed discussions of sepsis, infective endocarditis, intraabdominal infections, bacterial meningitis, osteomyelitis and septic arthritis, and prosthetic device infections.

Designed to provide a comprehensive and state-of-the-art overview of the use of urologic catheters and devices in clinical practice. Sections of the book have been structured to review the overall indication for the use of urologic catheters and devices, types available, complications and management. This text fills a critical need for resource materials on these topics. The book also includes highly practical presentations and of typical patients with catheters or devices seen in the clinical practice of geriatric urology, all in the form of case presentations with expert analysis and editorial commentary. Highlighting the integrated multidimensional aspects of care for urology patients, this book is unique in the inclusion of collaborating multidisciplinary authors who are all recognized experts in their field. Written entirely by urologic specialists, *Clinical Application of Urologic Catheters, Devices and Products* provides a unique and valuable resource in the field of practicing urology, for urologists, nurse practitioners, physician assistants, and for those currently in training.

This volume, the tenth of Hippocrates' invaluable texts on the practice of medicine in antiquity, provides essential information about human reproduction and reproductive disorders and expounds a general theory of physiology and pathology, in five Greek treatises presented with facing English translation.

This book summarizes current knowledge of the neuropsychology of dementia, highlights the multifaceted nature of the problem, and argue that an input from neuropsychologists can facilitate the advances made by other neuroscientists

First multi-year cumulation covers six years: 1965-70.
