"Prescribing Mental Health Medication is a text for nursing and medical practitioners who are learning how to diagnose and treat mental disorders with medication. Skills-based, it focuses on the following key issues: how to start and stop medication, how to dose, when to change medication, dealing with particular kinds of patients, specific illnesses and their medication, special populations and conditions, the management of side effects, practical issues such as monitoring medication with blood levels, administrative issues such as record-keeping." -- Publisher's description.

Medications are an important component of health care, but each year their misuse results in over a million adverse drug events that lead to office and emergency room visits as well as hospitalizations and, in some cases, death. As a patient's most tangible source of information about what drug has been prescribed and how that drug is to be taken, the label on a container of prescription medication is a crucial line of defense against such medication safety problems, yet almost half of all patients misunderstand label instructions about how to take their medicines. Standardizing Medication Labels: Confusing Patients Less is the summary of a workshop, held in Washington, D.C. on October 12, 2007, that was organized to examine what is known about how medication container labeling affects patient safety and to discuss approaches to addressing identified problems.
