Join the generations of students who have embarked on successful careers with a firm foundation in the theory and practice of blood banking and transfusion practices. Denise Harmening's classic text teaches you not only how to perform must-know tests and tasks, but to understand the scientific principles behind them.

-- The latest information on hepatitis, HIV, and AIDS -- Complete coverage of all blood group systems -- New information on quality assurance and informational systems in the blood bank -- Case histories give the reader a picture of what is going on behind the scenes -- Summary charts at the end of each chapter identify for students the most important information to know for clinical rotations -- Helpful pedagogical tools, including chapter outlines, objectives, review questions, and a glossary -- An extensive package of illustrations, including 20 plates of full-color drawings and photomicrographs -- Procedural appendices at the end of selected chapters -- Antigen-Antibody Characteristic Chart on the inside covers of the book provides easy access to the vast amount of information related to the blood group systems

Using an easy-to-understand writing style, this text integrates immunohematology theory and application to provide you with the knowledge and skills you need to be successful in blood banking. Problem-solving exercises and case studies help you develop a solid understanding of all areas of blood banking. Learning objectives begin each chapter. Illustrated blood group boxes throughout chapter 6, Other Blood Group Systems, give the ISBT symbol, number, and the clinical significance of the antibodies at a glance. Margin notes and definitions in each chapter highlight important material and offer additional explanations. Chapter summaries recap the most important points of the chapter. Study questions at the end of each chapter provide an opportunity for review. Critical thinking exercises with case studies help you apply what you have learned in the chapter. UPDATED! Information and photos on automation include equipment actually used in the lab. Flow charts showing antibody detection and identification help you detect and identify antibodies. Advanced topics on Transplantation and Cellular Therapy, the HLA System, Molecular Techniques and Applications, Automation, Electronic Crossmatching, and Therapeutic Apheresis make the text relevant for 4-year MLS programs.

In the absence of substitutes, the use of blood components remains essential in therapy. This guide contains a compendium of measures designed to ensure the safety, efficacy and quality of blood components and is particularly intended for all those working in blood transfusion services. In accordance with the approach recommended by the Council of Europe in this field, it is based on the premise of voluntary, non-remunerated blood donation. It describes the different blood components and gives information on their clinical indications and possible side effects.

Presents Hematology, a collection of case studies and teaching files for health care professionals. Provides access to teaching files on various blood related diseases, conditions, and disorders. Offers access to hematology case studies.
