A guide to the principles of project finance and to the practical issues that cause the most difficulty in commercial and financial negotiations.

The Principles of Project Finance reviews the technique of project finance. It explores, step-by-step, the key ingredients of the concept. The book is aimed at a business savvy audience, but one which is not necessarily up to speed on the concept, and has a global reach by covering both OECD countries and the emerging markets. Project finance is positioned at a key point between the global capital markets and the energy and infrastructure industries. To explain and illustrate the ideas behind project finance, the book is made of chapters written by a range of leading players in the market from around the world and is split into four sections: •

This is a self-contained text on the logic and institutions of project finance, supplemented by a series of project finance case studies illustrating applications in different economic environments, across different jurisdictions and at different stages of development. It will introduce an analytical framework drawing on applied institutional economics that includes and concentrates primarily on an analysis of the institutional logic behind generic project finance arrangements. The application of the institutional framework will be demonstrated with project cases from Hong Kong, Thailand, India, Europe and Azerbaijan – each at different stages of development. While each project case will have a general theme and will highlight aspects of interest to built environment professionals, it will primarily be used to illustrate one or more specific PF/PFI principle.

This book presents comprehensive coverage of project finance in Europe and North America. Over the last decade or so, private-sector financing through public-private partnerships (PPPs) has become increasingly popular around the world as a way of procuring and maintaining public-sector infrastructure, in sectors such as transportation (roads, bridges, tunnels, railways, ports, airports), social infrastructure (hospitals, schools, prisons, social housing) public utilities (water supply, waste water treatment, waste disposal), government offices and other accommodation, and other specialised services (communications networks or defence equipment). This book, based on the author's practical experience on the public- and private-sector sides of the table, reviews the key policy issues which arise for the public sector in considering whether to adopt the PPP procurement route, and the specific application of this policy approach in PPP contracts, comparing international practices in this respect. It offers a systematic and integrated approach to financing PPPs within this public-policy framework, and explains the project-finance techniques used for this purpose. The book deals with both the Concession and PFI models of PPP, and provides a structured introduction for those who are new to the subject, whether in the academic, public-sector, investment, finance or contracting fields, as well as an aide memoire for those developing PPP policies or negotiating PPPs. The author focuses on practical concepts, issues and techniques, and does not assume any prior knowledge of PPP policy issues or financing techniques. The book describes and explains: * The different types of PPPs and how these have developed * Why PPPs are attractive to governments * General policy issues for the public sector in developing a PPP programme * PPP procurement procedures and bid evaluation * The use of project-finance techniques for PPPs * Sources of funding * Typical PPP contracts and sub-contracts, and their relationship with the project's financial structure * Risk assessment from the points of view of the public sector, investors, lenders and other project parties * Structuring the investment and debt financing * The key issues in negotiating a project-finance debt facility.
