Clipper Programming Guide

When (and if) finished, it will prove a complete guide to Open Source Clipper programming. However, this set of notes is still very incomplete. The current plan consists of two introductory chapters, then the first part of the tutorial will cover the basic of the language, up to the procedural programming facilities and the native database-DBF file support.

All commands in CA-Clipper are defined using the #command directive and supplied in the standard header file, std.ch, located in the \CLIP53\INCLUDE directory. The syntax rules of #command and #translate facilitate the processing of all CA-Clipper and dBASE-style commands into expressions and function calls.

CA-Clipper for DOS Version 5.3 Programming and Utilities Guide

Clipper is an xBase compiler that implements a variant of the xBase computer programming language. It is used to create or extend software programs that originally operated primarily under MS-DOS. Although it is a powerful general-purpose programming language, it was primarily used to create database/business programs. One major dBase feature not implemented in Clipper is the dot-prompt interactive command set, which was an important part of the original dBase implementation. Clipper, from Nantu
