This course is an introduction to the modern abstract theory of groups and rings. Groups are abstractions connected with the concept of symmetry, and rings are “abstract number systems” in which there are versions of the arithmetic operations:

study of algebraic structures. Algebraic structures include groups, rings, fields, modules, vector spaces, lattices, and algebras. The term abstract algebra was coined in the early 20th century to distinguish this area of study from the other parts of algebra. Algebraic structures, with their associated homomorphisms, form mathematical
