Ozone Depletion And Climate Change

Climate change is concerned with how carbon dioxide, methane, and other greenhouse gases are altering the global climate system. Ozone depletion, on the other hand, involves how certain industrially produced chemicals containing chlorine or bromine are damaging the earth's protective

radiation. Climate Change

Ozone depletion and climate change are linked in a number of ways, but ozone depletion is not a major cause of climate change. Atmospheric ozone has two effects on the temperature balance of the Earth. It absorbs solar ultraviolet radiation, which heats the stratosphere.

depletion: Montreal Protocol - Canada.ca

Ozone depletion consists of two related events observed since the late 1970s: a steady lowering of about four percent in the total amount of ozone in Earth's atmosphere (the ozone layer), and a much larger springtime decrease in stratospheric ozone around Earth's polar regions. The latter
