Statistical Image Processing And Multidimensional

Images are all around us! The proliferation of low-cost, high-quality imaging devices has led to an explosion in acquired images. When these images are acquired from a microscope, telescope, satellite, or medical imaging device, there is a statistical image processing task: the inference of something—an artery, a road, a DNA marker, an oil spill—from imagery, possibly noisy, blurry, or ...

Statistical image processing differs from the more generic imaging processing techniques found in electrical engineering: whereas general image processing deals with images that may not be well described by a statistical or mathematical model, statistical image processing seeks to exploit such a model to address questions in fields such as remote sensing, medical imaging and computer vision, and other high-dimensional spatial problems.

An esoteric, open-source programming language—called R—could pave the way for open science. Thousands of scientists are participating in the R development community, including CRD's Talita Perciano. As a student, she contributed one of the first image-processing tools—called R Image Processing Analysis (RIPA)—to the community. Now with big science datasets in mind, she's updated the ...
