KEEPING BACTERIA AND VIRUSES FROM HARMING US 1. ANTIBIOTICS Bacteria and viruses can be controlled. Since bacteria are living, one way you can control them is to kill them. This can be done by taking antibiotics such as penicillin or tetracycline. The word antibiotic means "against living things" and they only kill living things.

living cells, viruses are dormant. Their “life” therefore requires the hijacking of the biochemical activities of a living cell. Bacteria, on the other hand, are living organisms that consist of single cell that can generate energy, make its own food, move, and reproduce (typically by binary fission). This allows bacteria to live in many places ...

## **Differences Explained**

Answer From James M. Steckelberg, M.D.

As you might think, bacterial infections are caused by bacteria, and viral infections are caused by viruses.

Perhaps the most important distinction between bacteria and viruses is that antibiotic drugs usually kill bacteria, but they aren't effective against viruses.
