Visual testing (VT) is also known as visual testing examination, nondestructive inspection, or nondestructive evaluation or examination. Visual testing is the most common nondestructive testing method. Visual testing is a popular NDT method, because it is so easy to perform, it is a low-cost method, and it requires minimal equipment.

What is Visual Testing (VT) in NDT?

The inspection of reciprocating engine parts during overhaul is divided into three categories: visual, structural NDT and dimensional. Many defects on the engine components can be detected visually, and a determination of airworthiness can be made at this time. the component is determined to be unairworthy, no further inspection or repair is required.
